# COMP 330 Fall 2019

Description: (3 credits, 3 hours).

- We study models of computation of increasing power.
- We begin with finite automata and regular languages.
- The next phase deals with context-free languages invented by linguists and now an essential aspect of every modern programming language.
- Finally we explore the limits of computability with the study of recursive sets, enumerable sets, self-reproducing programs and undecidability theory.

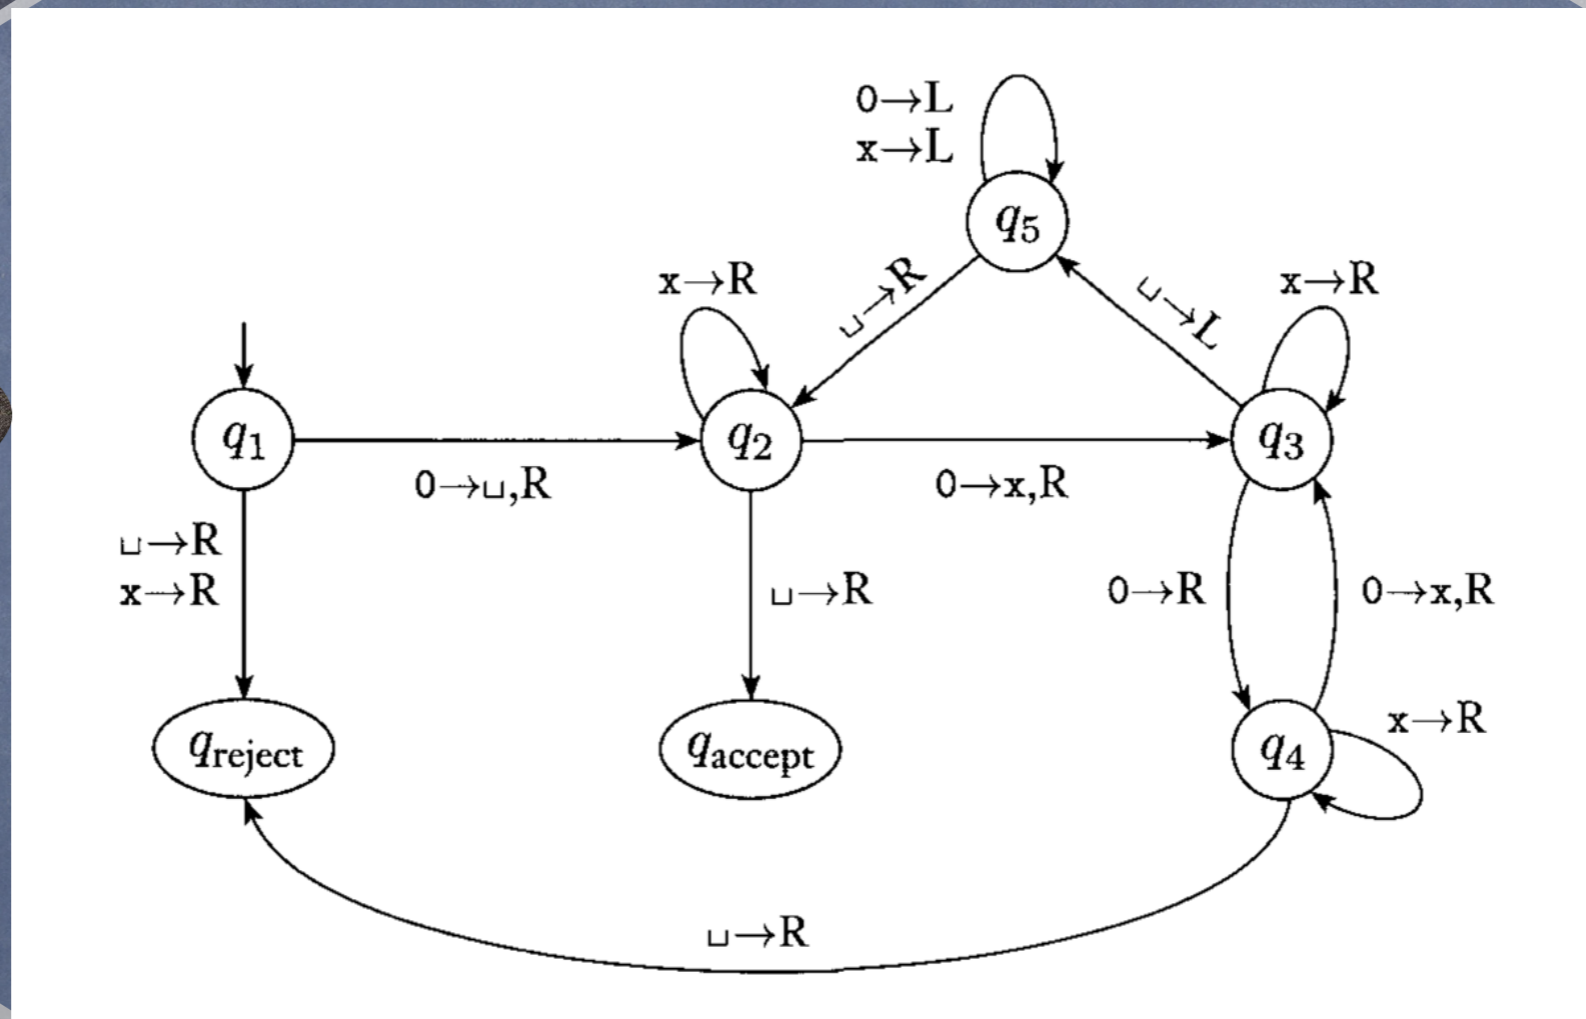

# Part 1: Regular expressions & Deterministic Finite Automata

# Part 2: Context-free Language & Pushdown Automata

# Part 3: Turing Machines, Computability & Complexity

# Mandatory Textbook
